#### PREFACE

The transliterated cuneiform texts presented in this volume are receipts of grain and oil, accounts of sheep, goats, cattle and donkeys, and various lists of slaves and other personal names.

Many similar texts have been previously published in volumes IX and XIII to XVI of this series. We are publishing here all the remaining texts of these kinds of documents which have been deciphered. Only fragmentary pieces, not yet cleaned or deciphered may belong to this category.

Usually these documents are not considered very important; literary texts, contracts, legal documents, etc., are, as a rule, thought to be more important for an understanding of Mesopotamian cultures. Yet "importance" is relative; in order to understand as fully as possible the culture of Nuzi every document or fragment of document has its value. Among the nearly four thousand tablets from the Nuzi area known to me, I have not yet found two that are exactly alike. Each document therefore adds some new kind of information. Either singly or in groups they constitute cumulative evidence, corroborating the interpretation of their content. The more tablets of one type one has, the surer one is of their general meaning.

These "lowly" documents have a value of their own. First of all is of course the great number of personal names. The appearance of certain names, singly or in groups, even the same sequence of names is of course significant not only to establish synchronisms, but also to identify family groups, the location of the tablets containing their names in certain archaeological units, the different amounts of grain given to certain individuals in the same sequences, etc. The economic and social significance of these texts is therefore obvious. Since very few personal names are given with the father's or mother's names, these sequences of names are very important in our study of the relative chronology of the Nuzi tablets.

In previous studies about the Nuzi tablets very few scholars have taken into consideration the relative chronology and the archaeological origin of the documents they were dealing with (I am sure that the reason for publishing the "room numbers" for every Nuzi tablet published was to point out the relation between the archaeological unit and the tablet). In a paper read before the American Oriental Society in 1942<sup>1</sup>, I summarized the results of a study on this subject. A revised form of this paper follows.

The epigraphic material of Nuzi comes from ten distinct archaeological groups:

1) The Western Suburban area, N.W. of Yorghan Tepe, (Starr, Nuz1, vol.II, Plan 30) has three buildings;

The Western house of Tehip-tilla, rooms 15-22.2 in which were found the archives of

<sup>(1)</sup> Cf. Journal of the American Oriental Society, vol. 62, p. 221.

<sup>(2)</sup> On Starr, *Ibid.* vol. II, Plan No. 30 there are two rooms 15. That the room from which came the tablets of Tehip-tilla is in the western building and not the central building is seen in the statement of Starr, *(Ibid.* vol. I, p. 334): "Nearly a thousand inscribed clay documents.." were found in this room. However this number is either exaggerated or is an error. In JEN I-VI, 233

Puhi-shenni and <sup>f</sup>Winnirki, their son Tehip-tilla, their grandsons Ennamati and Shurkitilla, their great-grandsons Takku and Tarmi-tilla and their great-great-grandson Teshurhe. Some legal documents of Haish-teshup, a brother of Tehip-tilla, were also found; they dealt with the inheritance of <sup>f</sup>Winnirki.

A few documents of Tehip-tilla were found in room 17.

Not a single document of Tehip-tilla was found elsewhere. (Other rooms listed in JEW publications are definitely errors in cataloguing.)

Since this building was not large enough to be used as a living center for the large family of Tehip-tilla and since room 15 had been previously a bathroom, later on transformed into a storage room, it must be assumed that the archives of this family were transferred here at a later time when the central building was built. This may be the explanation for the presence of legal and business documents only.

In view of the fact that the only other rooms in this building which had tablets were rooms 19 and 21<sup>3</sup>, and that these tablets were those of Ennamati and his wife <sup>f</sup>Uzna, it would appear therefore that this western building was first used, in its present form, by Ennamati rather than by Tehip-tilla or <sup>f</sup>Winnirki. Ennamati was the older son of Tehiptilla and Shurki-tilla the younger son. The only documents bearing the name of Shurkitilla found in this building are one lawsuit and one receipt of slaves; all other documents are joint lawsuits of Ennamati and Shurki-tilla. Thus we may conclude that Shurkitilla had little if anything to do with this building. Furthermore no document of his was found in other parts of this archaeological unit. Therefore there was no "House of Shurki-tilla."

In the central building the only room which had tablets was room 13. It was the store room for the archives of Tarmi-tilla, son of Shurki-tilla.

- 2) The Eastern House of the same suburban area as 1).
- A) Rooms 1 and 4 yielded the records of the family of Hashiya, son of Wahr-abi, his sons Musheya and Ith-apu, and Musheya's son Huite.
- B) Room 10 contained the documents of Hilpishshuh, son of Shuhunziriru and his son Kurpazah.
- C) Rooms 11 and 12 had the archives of Hutiya, son of Kushshiya and his son Kelteshup. (Hutiya, son of Kushshiya was the  $mar \ \tilde{s}ipr$  of the king and represented Shilwateshup, the son of the king, in lawsuits.)

These three families are much later than Tehip-tilla (probably contemporaries of the grand-children of Tehip-tilla.)

3) In the Eastern Suburban area, the house sometime called the house of Zigi (Starr, Ibid. vol. II, Plan No. 34)

Tablets were found only in rooms 30, 34 and 35. Room 34<sup>4</sup> contained the archives of Akkuya, son of Katiri and three later generations, and of Ilanu, son of Tayuki. Akkuya is older than Ilanu and a late contemporary of Tehip-tilla, son of Puhi-shenni. The only relation between these two families is found in a single text, a business deal between the son of Akkuya and the son of Tayuki. Few receipts of grain were found in this room.

tablets are listed as from room 15 and there are no more than 350 unpublished texts from Nuzi in the Oriental Institute.

<sup>(3)</sup> Recently I found the original manuscript of transcriptions made by Chiera soon after the tablets were excavated; room numbers are indicated. The following texts, not assigned room numbers in previous publications are listed as from T 19: HSS XIII 15, 62, 117, 366; AASOR XVI 60, 87; HSS XIII 393 should be corrected from T 14 to T 19.

<sup>(4)</sup> As in (3) assign A 34 to HSS XIII 6, 18; AASOR XVI 93.

But among the non-business documents were several lists of charioteers, including the sons of Tehip-tilla. SMN 410 is a list of 20 men in the command of Akap-shenni, son of Ziki, grandson of Akkuya; it includes Tehip-tilla, son of Puhi-shenni and three sons of the king, Aki-teshup, Iriri-tilla and Teshuya. There are also documents dealing with the property of the king.

4) In the same suburban area, the House of Shilwa-teshup, son of the king.

Tablets were found in rooms 19, 11, 13, 14, 15, 21, 23, 24, 25, 26, 29, 32, 33, 36, 41, 45 and 55. All the rooms, from which enough tablets were excavated, indicate a relationship with Shilwa-teshup or his servants. The largest number of tablets came from rooms 23 and 26; rooms 14, 13 and 11 had a good number of documents. In room 23 (about 250 tablets) most of the tablets are records of animals(131), animals' hides, wool and hair (34), grain (80) and lists of servants(23)<sup>5</sup>. In room 26 it is the reverse: receipts of grain and records of animals are very few. Room 23 was therefore the place where the records of Shilwa-teshup's herds were kept. In room 26<sup>6</sup>, in addition to the business contracts of Shilwa-teshup were found also several royal documents: the letter of king Saushshattar, documents of kings Ithi-teshup and Kipi-teshup and of the latter's son Hishmi-teshup, (probably an older brother of Shilwa-teshup), and the tablets of <sup>f</sup>Amminaya, the recipient of the Mitannian king's letter (probably the queen or a princess). All the other rooms of this building contained tablets of various kinds belonging to Shilwa-teshup and his slaves. One real estate document of his was found elsewhere (SMN 363 in the palace room L 2). SMN 526, an inventory was found in R 76.

- 5) The Palace Area on the main mound is the area within streets 4, 5 and 12. (See Starr, Ibid. vol. II, plan 13). It includes part of squares K, N, P and S and squares L, M, Q and R. Tablets were found in all these squares except P<sup>8</sup>. I am unable to determine whether C 1 and C 2, used in previous publications, refers to L 1 and L 2 or M 1 and M 2. The largest number of tablets was found in N 120(175), R 76(152), M 79(54) and L 2(48). N 120 had the archives of fullpunnaya and of Uthap-tae, son of Artura (the only family archives in the palace area) and the armament and military documents published in HSS XIV. In L 2 were the records of the trial of mayor Kushshi-harpe, large tablets of lists of women and garment receipts, apparently all written by the same scribe. In L 14 were receipts of special kinds of grain and wagons from various cities. L 27 had the large inventories published in HSS XIV. The tablets of L 44 deal especially with garments. M 1 had tablets about horses and lists of men. M 79 and 89 had records of reeds, arrows, arms and metal. R 49 had receipts of grain for the queen. R 76 had all kinds of documents of the royal family and oil for the gods. (Notice that these were not found in the temple area). In K 32 were found contracts of queen farmennaya.
- 6) The Temple Area (Cf. Starr, *Ibid.* vol. II, Plan 13) is delimited by streets 5, 6, 7 and 8, in squares G and H. Tablets were found in G 29, 53 and 55 and H 15, most of them in bad condition. In G 29 and 53 we have mostly contracts of Qirib-sheri, son of Hutteshup and of Ilaya, son of Hapira.
- 7) The buildings N. of the Temple in squares C, D, H and I. In rooms C 19 and 28 about 160 tablets constituted the records of the family of Ziki, son of Artirmi, his son

<sup>(5)</sup> As in (3) assign to A 23: HSS XIII 155, 252, 269, 373, 456, 497; HSS XIV 505, 507, 575. Correct HSS XIII 323 to A 23 and HSS IX 57 from A 25 to A 23; HSS XIII 432 to L 14. AASOR XVI 51 (SMN 553) was originally SMN 533 from room R 76.

<sup>(6)</sup> Assign A 26 to HSS XIII 40 and AASOR XVI 53; A 33 to HSS XIV 543.

<sup>(7)</sup> It is doubtful that HSS IX 81 should be L 2.

<sup>(8)</sup> HSS XIV 130 and 167 assigned to room P 47 are similar to HSS XIV 121, 124 and 142 from room R 49. I believe therefore that the first two texts also belong to R 49. The slips with the room numbers were written by a native Arab who easily confused P 47 and R 49.

Uthap-tae and grandson Shar-teshup. The three tablets of Ziki were written by the oldest scribe, Apil-sin, "scribe of the king." Room C 19 had mostly grain receipts and room C 28 legal and business documents. The grain receipts often mention the palace and the SAL. LUGAL. Some 280 documents were found in D 3 and 6, mostly grain receipts for the king's horses, officers, the queen and the gods. In D 6 was found the omen text SMN 3180. It is therefore very certain that the people living in this area were connected with the temple and the palace.

- 8) The area **S.W. of the Temple**(square F). Tablets were found in rooms 4, 6, 19, 25, and especially 16 + 26 and 24. In room 16 + 26<sup>9</sup> the name Hutanni(without patronimic) is the most common on the tablets. In room 24, in which was found the bronze tablet HSS XIV 1 the names of Sill-apuhe and his sons predominate in most contracts.
- 9) The area S.W. of the Palace(squares K and P). Room P 313, located on street 4, N.W. of street 3 had 7 school tablets. The names of Arshatuya, son of Shellapai, and his son Hampizi, and Taya and Teshup-mati, sons of Shertamilu and Taya's son Ehel-te shup are on business documents from all the rooms of this area in which tablets were dug. It is difficult to establish the relation of these two families but it is evident that they occupied the houses of this part of the mound. 10
- 10) The area East of the Palace (squares N and S). As already indicated by Starr, (Ibid. vol. I, p. 313) his "group 19" which includes rooms S 112, 124, 130, 132, 129 and 133 was occupied by Purnazini, his son Mushapu and three more generations. <sup>11</sup> Group 18A of Starr had a large number of tablets in S 151, <sup>12</sup> represented by the family of Huya, son of Shamik-atal. In room S 110 were the records of Artura, son of Kushshiya and his family. In room S 113 were documents of Shehal-teshup, son of Tehup-shenni. <sup>13</sup>

In this brief summary no account is made of the texts which are found in many publications such as TCL, CT, etc. because these tablets were purchased from dealers before Nuzi was excavated. (Only one tablet, in the Yale Babylonian collection, is of the same shape, color and content as tablets from room D 6). Rooms which had fewer than ten tablets were not included here since in practically every case it would have been difficult to draw any positive conclusion.

The results of this study indicate without any doubt that the type of texts published in the present volume come essentially from groups 4, 5 and 7. Legal and business texts come from the other groups. Only group 7 had mixed types.

In another study on relative chronology I shall be able to prove that the texts of this volume belong to the latest period of Hurrian occupation of Nuzi.

Wellesley College June 1957

Ernest R. Lacheman

<sup>(9)</sup> The slips with the tablets had clearly numbers 16 + 26; in Starr, Ibid. vol. I, p. 222 it would appear that originally room F 16 extended over to room 26. Therefore it is probable that these tablets came from the earlier part of F 16.

<sup>(10)</sup> Starr, Ibid. vol. I, p. 282 says that "twenty-eight tablets" came from room P 467. But no such tablets were received at the Semitic Museum. His remarks at the bottom of the same page would imply that no tablet came from P 465. Yet quite a few tablets were accompanied by P 465 slips

<sup>(11)</sup> The tablets referred to in Starr, Ibid. vol. I, pp. 316-317 are published here as Nos. 311 and 449.

<sup>(12)</sup> In AASOR XVI 63, read:  $\check{S}\acute{u}k-ri-ia$  mar  $\check{H}[u-ia]$ . AASOR XVI 59 should be room S 151.

<sup>(13)</sup> Starr, Ibid. p. 309 suggests that his group 17(S 108, 110, 113) is a chapel but the texts indicate a private house.

The measurements of tablets are given in millimeters. The sequence is usually height by width by thickness, except where the measurement is preceded by a star, in which case we have width by height by thic

The measurement of tablets is given in millimeters. The sequence is usually height by width by thickness, except where the measurement is preceded by a star, in which case we have width by height by thickness.

The abbreviations are the same as in previous volumes: SMM indicates the Catalogue number of the tablets from Busi in the Harvard Semitic Museum. For the system of room numbers, see HSS XIV,pp. XIX-XX

The method of transliteration is that of Thuresm-Dangin. Since it does not have a EE value for EI I have used gr. <> indicate an omission by the scribe; these arrows are used primarily to indicate that the omission is on the tablet and is not a typing mistake. -: - is used for the sign when a word is divided at the end of a line and goes over to the next line.

In the middle of a text a new paragraph indicates that the previous line is followed by an horisontal, separating line.

The transcription of legograms is not always consistent: these texts have been typed ever the course of several years and I have become less and less certain as to the exact Husi Akkadian equivalent of Sumerian logograms.

Here should be mentioned a previous mistake: MSS XIV 50 and MSS XV 250 are the same tablet.

Note: The Upper edge is divided in two columns by a vertical line; thus it would appear that lines 11-13 form the first column and lines 15.16 and 14(in this order) form the second column. It is quite possible, however that since the reverse is not divided in columns, that the vertical line on the upper edge is made to separate the crowded writing so that the order should be lines 11, 15 12, 16, 13, 14.
